

Retention Tether (RT)

- **Quick Release Clip-load bearing (19.6Kn or 4300lbs) locking safety mechanism**
- **One inch hollow core webbing-load bearing (18Kn or 4000lbs)**
- **Marine grade bungee**
- **Locking or non-locking carabineer (30Kn or 6700lbs)**

Designed to be used by an assaulter/operator, military, DOD or tactical law enforcement as a tie in to almost any airframe. The HRS-T affords the user quick cut away/release upon the landing of the aircraft at the objective. This feature lets the user disembark from the aircraft quickly and move directly into their mission.

The HRS-T provides secure, lightweight, durable static strength to the user who appreciates low mass/volume equipment that performs fluidly in austere environments. The HRS/T also can be used as a hasty extraction tether, via a friction loop connection in conjunction with the carabineer.

Marine/Waterborne units have utilized the HRS-T to secure operational personnel or prisoners to the watercraft.
